

Write a python function to calculate the factorial of a number

```
def factorial(n):  
    if n<0:  
        print("factorial is not defined")  
    fact=1  
    for i in range(1,n+1):  
        fact=fact*i  
    return fact  
print(factorial(5))
```

Output:

120
