

Write a python function to check if a string is a palindrome or not.

```
def palindrome(text):  
    text=text.lower()  
    if text==text[::-1]:  
        return True  
    else:  
        return False  
Word1="python"  
Word2="level"  
print(palindrome(word1))  
print(palindrome(word2))
```

Output:

False

True
